    }
]

```

Follow the below description to make the required project :

1. You need to create a project first then create an app inside it.
2. Create a templates folder inside the main project folder and create a base.html file inside it.
3. Create a templates folder inside the app folder and create a index.html file inside it.
4. You need to add bootstrap file in the base.html and then inherit the file inside the index.html

5. Finally show the required items in the index.html file.

BeaverTails

This is a longer card with supporting text below as a natural lead-in to additional content. This content is a little bit longer.

Breakfast Potatoes

This is a longer card with supporting text below as a natural lead-in to additional content. This content is a little bit longer.

Canadian Butter Tarts

This is a longer card with supporting text below as a natural lead-in to additional content. This content is a little bit longer.

Montreal Smoked Meat

This is a longer card with supporting text below as a natural lead-in to additional content. This content is a little bit longer.

Nanaimo Bars

This is a longer card with supporting text below as a natural lead-in to additional content. This content is a little bit longer.

Pate Chinois

This is a longer card with supporting text below as a natural lead-in to additional content. This content is a little bit longer.

Pouding chomeur

This is a longer card with supporting text below as a natural lead-in to additional content. This content is a little bit longer.

Poutine

This is a longer card with supporting text below as a natural lead-in to additional content. This content is a little bit longer.

Rappie Pie

This is a longer card with supporting text below as a natural lead-in to additional content. This content is a little bit longer.

Split Pea Soup

This is a longer card with supporting text below as a natural lead-in to additional content. This content is a little bit longer.
